

Interfaces

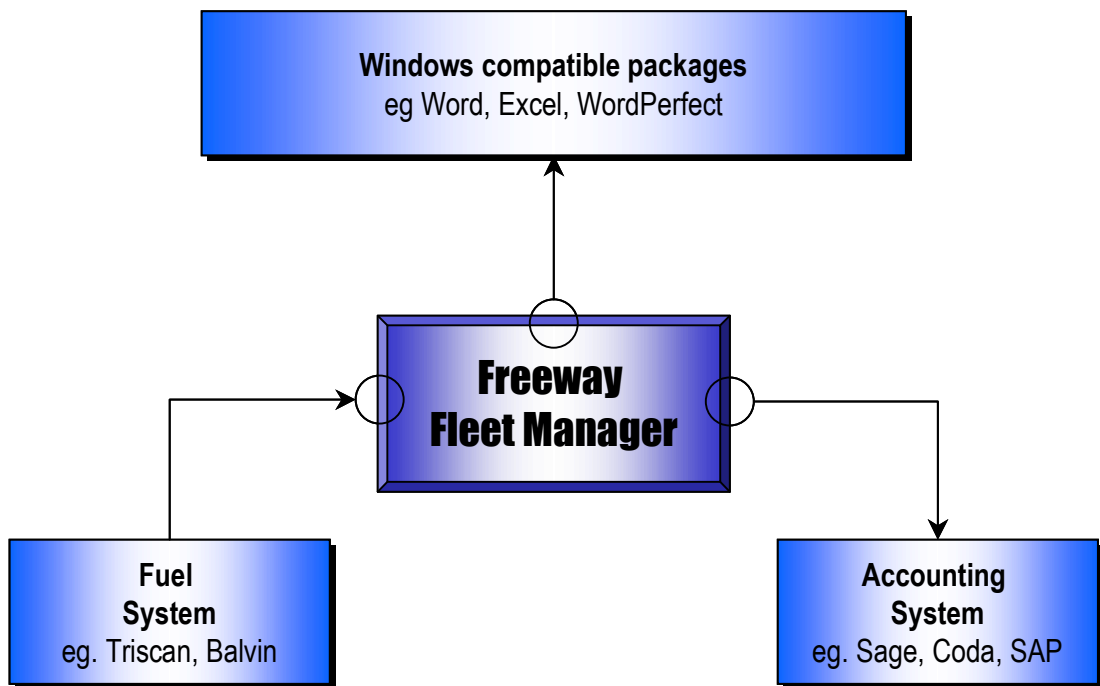

External Interface Modules

FREEWAY supports a number of Interfaces including imports from Fuel Systems and exports to Accounting Systems. Other interfaces can be accommodated.

Tabular and graphics information can be cut and pasted from FREEWAY into Microsoft compatible packages such as Excel, Word Perfect or CorelDraw.

This interfacing ability enhances FREEWAY's capability as a fully Windows-operational system and allows easy access to figures and graphics for presentations and reports.

The Fuel Import Facility only requires you to click the Import button and select the file to be imported. FREEWAY does the rest. Any errors in imported data, such as unidentified vehicles, are logged in such a way that they can be easily re-imported when the error has been corrected.

Selecting the Accounts Output Screen automatically collates and displays the data to be transferred. Just click on the Create File button to export the data.
