

## Freeway Fuel Setup

### 1. Setup/Fuel/Tanks:

Tanks and Pumps must be created before the Freeway fuel system can be used.

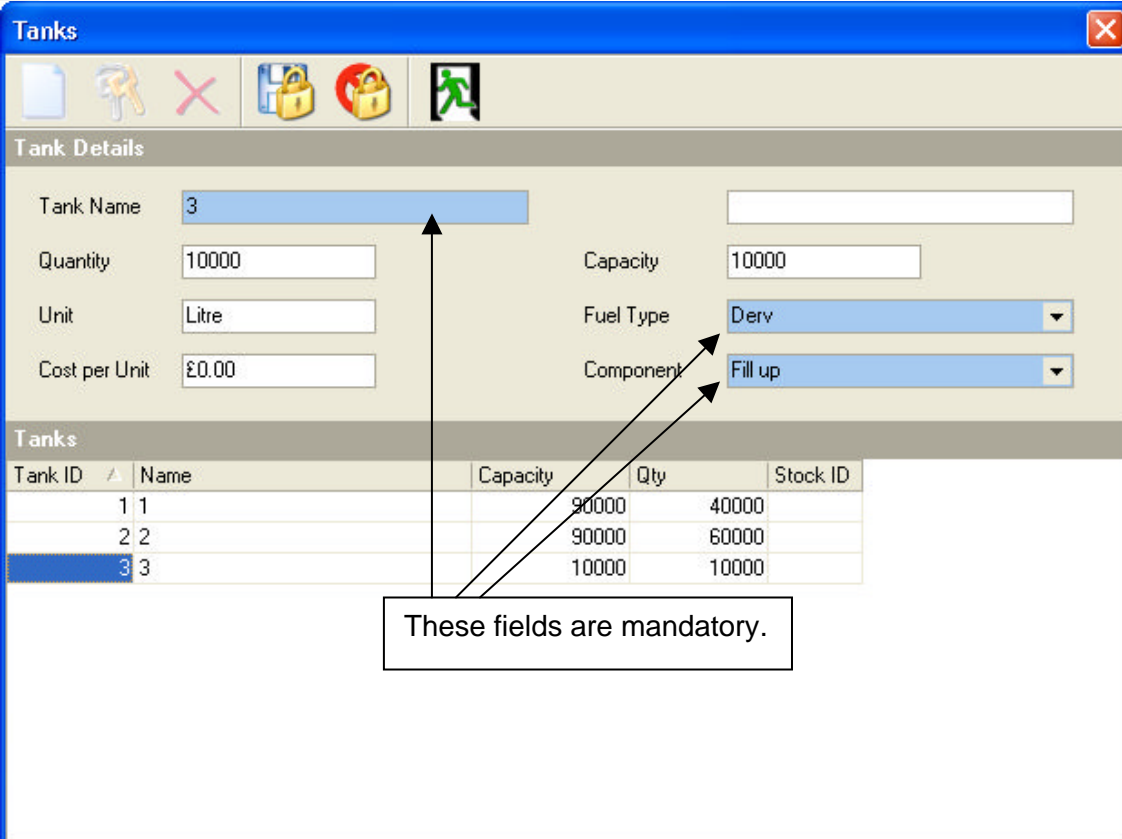

From the menu, open the tanks form: **Setup/Fuel/Tanks**. There are three mandatory fields in this form:

- **Tank Name:** This name must correspond to the name of the tank in the external system (eg Triscan or Balvin). Note: when fuel is imported Freeway will look for matching Tank and Pump names.
- **Fuel Type:** A fuel type must be selected. Each tank can contain only one type of fuel.
- **Component:** A transaction type, sub-type and component must be created where the transaction type must be "Fuel".

1. Click "Add" to create a new tank. 

2. Fill in at least the fields discussed above.

3. Click "Lock and save changes" 

**Tanks**

Tank Details

Tank Name: 3

Quantity: 10000

Unit: Litre

Cost per Unit: £0.00

Capacity: 10000

Fuel Type: Derv

Component: Fill up

Tank ID	Name	Capacity	Qty	Stock ID
1	1	90000	40000	
2	2	90000	60000	
3	3	10000	10000	

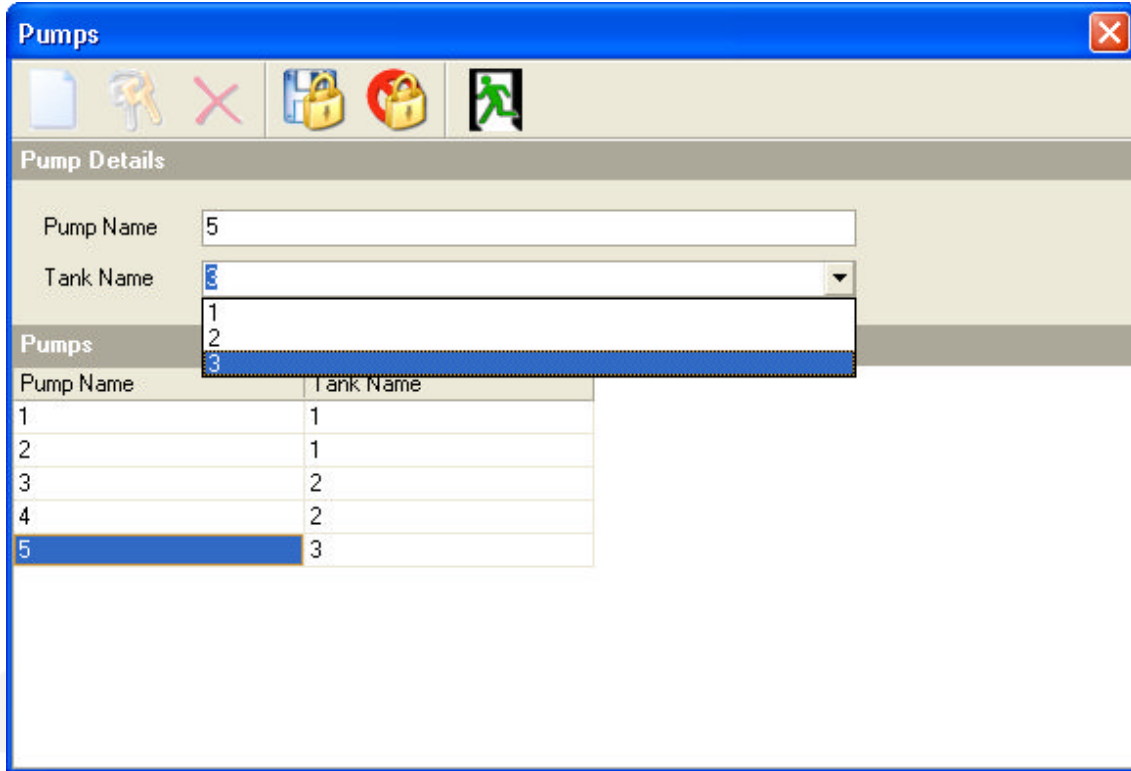

These fields are mandatory.

Note: Once fuel data has been imported for a tank, then the fuel type may not be modified and the tank may not be deleted.

## 2. Setup/Fuel/Pumps

- Pump names must correspond to those in the external fuel system.
- Each tank may have multiple pumps.

1. Create a pump and link it to the tank you created.

**Pumps**

**Pump Details**

Pump Name: 5

Tank Name: 3

Pump Name	Tank Name
1	1
2	1
3	2
4	2
5	3
